

VIDEO BRIEF · 60 SECONDS

LandlordApp.io — 60-Second Demo Video

Editor brief: voiceover script, on-screen visuals, asset list

1 · Tone & vibe

- Operator-to-operator, confident, mild dry British humour. *Not* “rEvOIUtIoNiSe yOuR rEnTaL eMPlrE” SaaS-bro.
- Cuts every 2–4 seconds to keep momentum. Almost no static frames.
- Music: warm, mid-tempo, ~110 BPM, builds slightly toward the CTA. Think “trustworthy fintech” not “epic action”.
- Voice: female or male, late-30s, calm. UK accent strongly preferred.

2 · Time-coded script

The script table is the centrepiece. Each row is one shot or beat — read straight down the Voiceover column for the spoken track.

Time	Voiceover	On-screen visual	Caption
0:00 – 0:04	“Most HMO landlords are running a six-figure business on a spreadsheet.”	Quick frustration montage: messy Excel scrolling, tabs piling up, sticky notes on a fridge, finger swiping a 22-row WhatsApp thread of rent reminders.	<i>Running a portfolio on Excel?</i>
0:04 – 0:10	“There’s a better way.” (beat) “LandlordApp puts your whole portfolio on one screen.”	Smooth fade to the Dashboard. Hero card animates in (Net Profit / Mo), then the 3-stat row counts up: Properties, Tenants, Occupancy. Six-month cashflow chart bars rise into place.	<i>Your portfolio. One screen.</i>
0:10 – 0:18	“Every rent payment — due, paid, overdue — in seconds. Chase a tenant by WhatsApp without leaving the app.”	Cut to Rent Collection tab. Collected progress bar fills to 87%. Overdue pill pulses red. Cursor taps “Chase 12” → WhatsApp share sheet slides up with a pre-written message.	<i>Rent. Collected.</i>
0:18 – 0:26	“Stay on top of gas safety, HMO licences, and maintenance — all on one calendar.”	Diary / Compliance view. Calendar dots: green, amber, red. A “Gas Safety expires in 12 days” notification slides in. Maintenance ticket flips: Open → In Progress → ✓ Resolved.	<i>Compliance. Maintenance. One calendar.</i>

Time	Voiceover	On-screen visual	Caption
0:26 – 0:36	“Model any deal before you commit. Our AI agent watches the portfolio for you — and flags the bleeders before they cost you.”	Deal Analyzer: numbers tick up live as inputs change (£/wk rent, occupancy, mortgage). KPI cards land green. Then cut to AI Portfolio Agent — typewriter effect: “47 Tremaine Rd: void cost £1,260 over the last 90 days. Recommend re-listing this week.”	<i>Deal Analyzer. AI insight.</i>
0:36 – 0:46	“Need a tenancy signed? Generate the agreement, send your tenant a link — they sign on their phone. Stored on their profile, with timestamps. Done in a minute.”	iPhone-in-hand shot. Tenant gets WhatsApp with branded “Sign your agreement” button. Taps. Agreement scrolls. Finger draws signature. Big green ✓. Cut back to dashboard tenant card showing: Signed · 28 Apr 2026 · View agreement →.	<i>Sign on the move.</i>
0:46 – 0:54	“Built for operators who run rooms, whole units, or short-stays. From 3 properties to 300.”	Property cards multiply across the screen — Owned / Managed / Airbnb tags lighting up in turn. Map-style overlay (UK outline with pins lighting up).	<i>HMO · R2R · SA · BTL</i>
0:54 – 1:00	“LandlordApp dot io. Free forever for three properties. No credit card. No gimmicks.”	End frame: logo lockup, URL landlordapp.io, big teal “Start free →” button gently glows. Trust line beneath: “Built by a landlord, for landlords.”	<i>landlordapp.io</i>

Pacing target

VO total: ~113 words = 56–58 seconds at 120 wpm. Final 2 s: silent logo hold + button glow.

3 · Shot list / assets needed

Capture each at **1920×1080 desktop** and **390×844 mobile** unless noted. Use the demo account (demo@landlordapp.io / **DemoAccount2026!**) so figures look populated.

1. Excel-on-laptop frustration shot — stock footage is fine.
2. Dashboard with the hero card + stat row + cashflow chart populated.
3. Rent Collection tab with overdue chips + WhatsApp share modal opening.
4. Diary / calendar with green / amber / red dots + a maintenance ticket animation.
5. Deal Analyzer — record interaction live so the numbers tick up.
6. AI Agent panel with a real-looking insight line (copy can be pre-written).
7. Mobile — iPhone-in-hand shot of the `/sign/{token}` page. Real signature drawn.
8. Tenant detail modal showing the green “Signed on ...” badge.
9. Property cards grid (Owned / Managed / Airbnb / 2-bed tags).
10. Logo + URL + CTA button (transparent PNG of [favicon.svg](#) available in repo).

The demo seed already includes 5 properties / 12 tenants / 3 landlords / SA income on one property — ideal for filming.

4 • Music + pacing notes

- Cuts on the beat where possible. Aim for a cut every 2–3 s in the middle (0:18–0:46) where features stack up.
- Music swells *slightly* at 0:54 for the CTA. Not a drop — just a lift.
- Add subtle UI sounds (taps, a soft “ka-ching” on rent collected) at low volume — feels tactile.
- Sound design > music. Keep music under **-18 LUFS**.

5 • On-screen captions

Every line of VO should also appear as a short burned-in caption (bottom-third, white on a subtle dark gradient) — 70 %+ of social-feed views are muted. Captions in the table above are already shortened for that.

6 • Alt CTA endings

Pick one — A/B test on the landing page.

- A.** “LandlordApp dot io. Free forever for three properties. No credit card.” (current)
- B.** “Stop running your portfolio on a spreadsheet. Start at landlordapp dot io — free forever for three properties.”
- C.** “Built by a landlord, for landlords. Try LandlordApp free at landlordapp dot io.”

7 • One thing to flag to the editor

Don't do this

Avoid stock footage of people in suits shaking hands or pointing at laptops. Every operator has seen it. Keep the camera **on the product**. The product is the hero.
